

ASBESTOS SURVEY REPORTS

for the

**DEPARTMENT OF TRANSPORTATION
DISTRICT 11, SAN DIEGO**

JUNE 1999

Prepared By:

Department Of General Services
Real Estate Services Division
1300 I Street, Suite 700
Sacramento, CA 95814

Document #: DOTADS.046
DOTADS.045

These Asbestos Survey Reports document exposed asbestos containing materials in state-owned buildings constructed prior to 1989 which were surveyed by private asbestos consultants under contract with the Real Estate Services Division, Professional Services Branch (PSB) of the Department of General Services (DGS). The reports are printed output of the Structures Information System (SIS), Asbestos Data System (ADS) which provides automated tracking and electronic access to asbestos data for reporting, notifications, reinspections and other uses. These reports have been prepared in accordance with the PSB Asbestos Surveys Standard Procedures Manual (Survey Manual) and have undergone an extensive review and approval process. Departments are expected to maintain this data as an element of their Operations and Maintenance Program and in accordance with requirements as set forth in the Survey Manual.

It is recommended that each department distribute these reports to building users in accordance with asbestos notification law and the department's Asbestos Management Plan. Users who need further information to clarify the data may find interpretive reports in the first ten tabs of this document, written by the consultants who provided the survey data. Survey firms can be identified by the consultant's three letter Firm Code, shown in either the upper left or the upper right corner, and as referenced in the Personnel and Company Qualifications Reports. PSB has compiled past data into these reports so that prior PSB reports may be archived.

A major change in the ADS, as compared to prior PSB surveys, is the requirement to survey a specified list of reportable materials. In response to changing regulations and industry standards, certain materials have been assumed as asbestos-containing materials in lieu of performing sampling and lab analysis. If this presents an Operations and Maintenance problem for you, additional samples can be entered into the system as necessary to rebut an "Assumed Positive" status. Other reportable materials which are not suspect as asbestos-containing materials have been reported as "Assumed Negative". Consultant surveyor's responsibilities are described in detail in the Survey Manual that is available to all Departmental Asbestos Coordinators and Facility Managers.

Reports and other forms necessary to make changes to the published data may be printed through the ADS, available on the Internet. Refer to the ADS User's Manual at the back of this report for further instructions. PSB periodically conducts training seminars on the use and requirements of the ADS and the Survey Manual which are open to all state employees. Prior to undertaking the management of the ADS for your department or facility, it is recommended that you obtain this training.

Homogeneous Material Summary Report

Date: 06/08/99

Facility: DISTRICT 11 OFFICE
Facility Contact: VICTOR NAVA

During an asbestos reinspection Northwest Envirocon, Inc. (NWE) recorded a total of two Immediate assessments. A list of Immediate findings follows:

- DSA 3617 DISTRICT OFFICE COMPLEX:

Material 6 (PIPE FITTING (HIGH TEMP)) in R-228 (BLDG. 3, PIPECHASE 6).

Material 9 (PIPE INSULATION (HIGH TEMP)) in R-74 (BLDG. 1, PIPECHASE 1).

Field Immediate conditions recorded for pipe insulation and pipe fittings, by NWE represent damage to materials which could result in episodic asbestos fiber release. These conditions would not achieve an Immediate status as determined through the use of the algorithm scores required by the Division of the State Architect, Asbestos Survey Procedures Manual. The immediate conditions for the pipe insulation and pipe fittings appear to be the result of previous maintenance activity in the area.

Facility: DISTRICT 11 OFFICE
Facility Contact: (N/A)

The Department of Transportation building surveys indicate no critical areas that require immediate or short-term abatement. There are areas where long-term abatement is necessary. The surveys generally indicate that most areas are in good condition, and suggest that abatement should not be necessary for many years. No buildings were inaccessible and there were no inaccessible areas or rooms within the building.

No Immediate hazard conditions were observed in the Department of Transportation buildings during the survey.

Facility: DISTRICT 11 OFFICE

Facility Contact: (N/A)

This report presents and discusses the results of an asbestos-containing materials (ACM) survey for the State of California, Department of Transportation (DOT). ACMs are present in the majority of the surveyed buildings in District 11. The majority of the ACMs were in generally good condition on the day of the survey and should pose little exposure potential to airborne asbestos fibers during normal building activity unless the materials are damaged or disturbed. There were limited areas of damage and/or deterioration of the ACM insulations observed throughout the surveyed buildings. These areas should be repaired and receive periodic follow-up evaluations as specified by the Operations and Maintenance Plan (OMP):

No asbestos was detected in samples collected in the following Buildings.

<u>OSA#</u>	<u>Building Name</u>
3620	Archeologist building

Recommendations

District Office Bldg: Osanum 3617

The asbestos-containing piping insulation in the 1958 portion of the District 11 Office Building (second floor) is in fair condition and has contaminated the ceiling batting. This material should receive prompt attention.

In the 1966 portion of the building, asbestos-containing spray-applied fireproofing is present on the structural elements (metal deck, steel and concrete) of the second floor. There is extensive over spray on walls, HVAC ducts, and piping. Loose asbestos-containing fireproofing material was observed on suspended ceiling tiles and HVAC ducts. The asbestos-containing spray-applied fireproofing should be removed in an expeditious manner.

Facility: DISTRICT 11 OFFICE
Facility Contact: VICTOR NAVA

Upon review of all information collected, Northwest Envirocon, Inc. (NWE) recommends the following abatement alternatives for the facility.

Immediate Conditions:

NWE recommends spot removal or repair of the damaged Thermal System Insulation in the following Building:

DSA 3617 DISTRICT OFFICE

The major portion of these materials were in good condition and they would have been assigned a long term priority were it not for this damage. Either of the two options, spot removal or repair, would be more cost effective than full scale abatement of the materials.

Facility: DISTRICT 11 OFFICE

Abatement Options:

The surveys generally indicate that most areas are in good condition, and suggest that abatement should not be necessary for many years. The recommended abatement options are Long Term removal with the implementation of an Operations and Maintenance plan (O&M).

ACM in most of the DOT buildings contained only non-friable floor tile, gypsum board, or transite pipe. These are Long Term abatement actions. An Operations and Maintenance Plan (OMP) should be implemented and properly trained maintenance personnel should become aware of the areas noted in the Presentation of Survey Findings.

No Immediate hazard conditions were observed in the Department of Transportation buildings during the survey.

The OMP should be implemented with regard to all ACBM until removal of the material has been initiated.

Facility: DISTRICT 11 OFFICE

Recommendations for the surveyed buildings are based upon the algorithm assessment factors for the asbestos survey provided by the Office of the State Architect. These factors assume a relationship between airborne asbestos fiber levels and the condition of the asbestos-containing materials (ACM). In general, the higher the algorithm value, the greater the potential for building occupant exposure to airborne asbestos fibers.

Implementation of the O&M Plan is recommended for all buildings of District 11 which have asbestos-containing materials. These O&M procedures are designed to minimize the risk of exposing District 11 employees, contractors and other building occupants to asbestos fibers released from asbestos-containing materials during normal building activity, maintenance, demolition and renovation. In general, asbestos-containing materials should be removed prior to renovation, demolition or other physical disturbances and replaced, as necessary, with non-asbestos-containing materials. The O&M Plan should remain in effect on an area-by-area basis until removal of all asbestos-containing materials is completed. The condition, accessibility and location of ACM in the surveyed buildings were evaluated to determine the appropriate management alternative(s).

Recommendations

It is recommended that the limited damage and deterioration on asbestos-containing piping and mechanical equipment insulation be repaired as soon as feasible within the guidelines of the OMP. These repairs would be an interim control measure until the materials are removed.

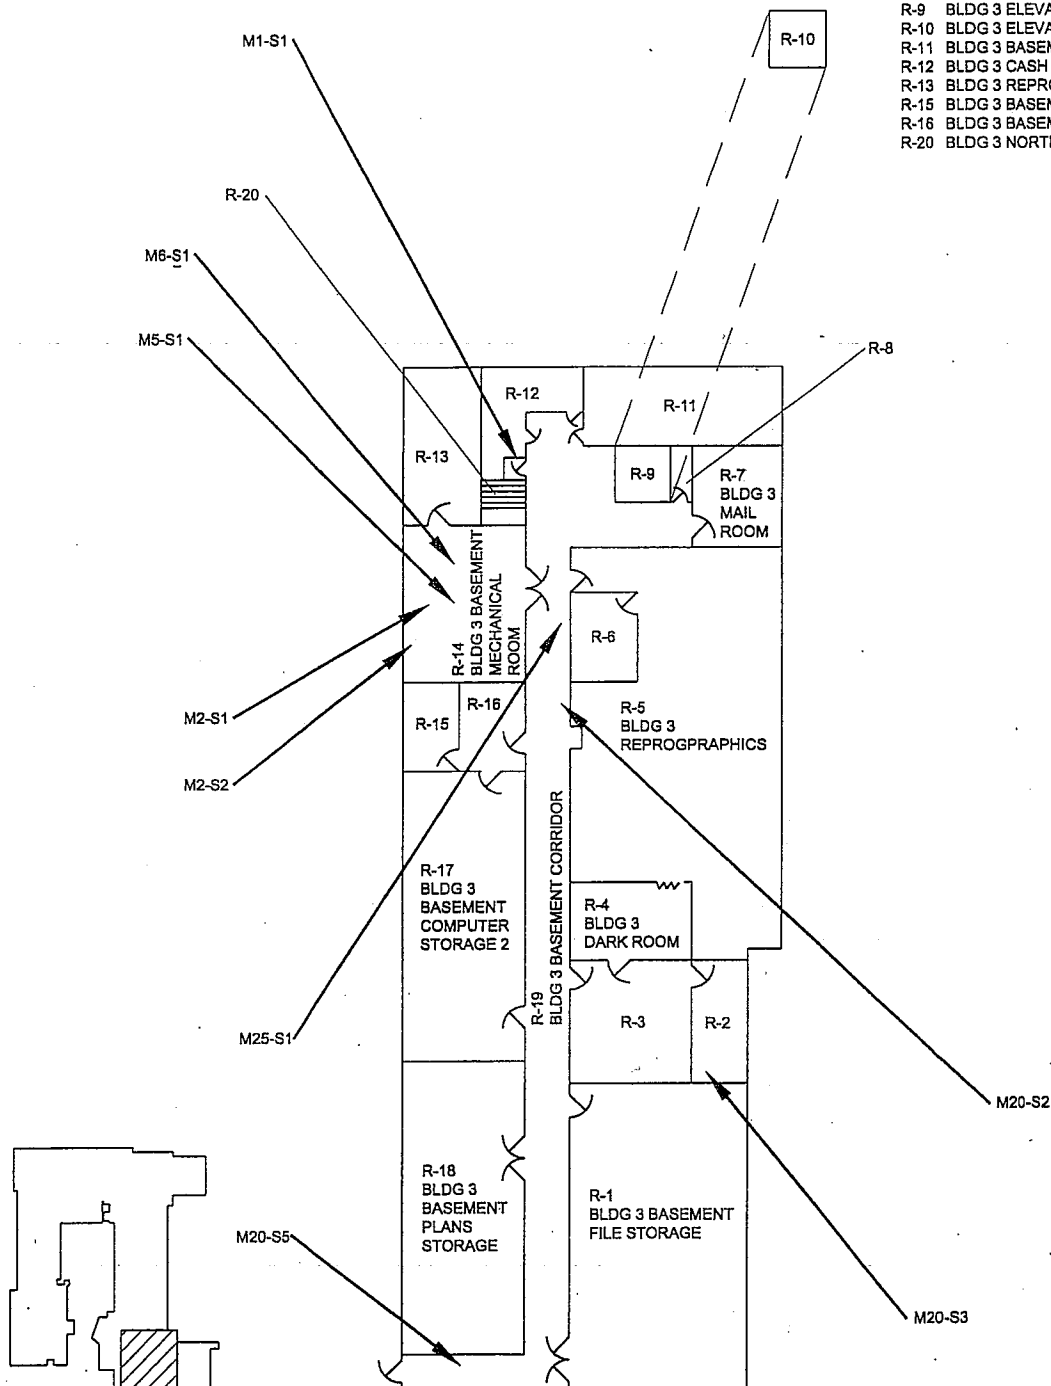

District 11 Office Bldg: Osanum 3617

Remove the asbestos-containing spray-applied fireproofing from the Second Floor 1966 portion of the District 11 Office Building. Replace all materials removed with a non-asbestos-containing material as required.

Repair or remove damaged piping insulation in the Second Floor 1958 portion of the District 11 Office Building including the contaminated batting.

In occupied areas where ACMs are exposed to building occupants, these materials should be routinely inspected and as conditions warrant (e.g., physical/water damage, deterioration) should be repaired or removed and replaced with a suitable non-asbestos substitute. Due to the non-homogenous nature of floor tiles, additional sampling should be done when maintenance, renovation or demolition work is to occur in areas where floor tile has previously been determined to contain no asbestos.

BULK ASBESTOS ANALYSIS REPORT

LAB JOB # 25167-1
Date Received: 7/11/97

NVLAP # 101442
DOHS # 1153
Date Reported: 7/14/97

<u>Sample No.</u>	<u>Color/Description</u>	<u>% Type Asbestos</u>	<u>Other Materials</u>
729-11-001	Homogeneous light gray trowelled-on metal lath, light weight rough finish w/out scratch (finish plaster) E wall, 6ft S of N wall, 2ft above floor DSA #3617	NONE DETECTED	Granular Mins. Gypsum Binder
729-11-002	Homogeneous light gray trowelled-on metal lath, light weight rough finish w/out scratch (finish plaster) E wall, 4ft S of N wall, 3ft above floor DSA #3617	NONE DETECTED	Granular Mins. Gypsum Binder
729-11-003	Homogeneous light gray trowelled-on metal lath, light weight rough finish w/out scratch (finish plaster) E wall, 3ft S of N wall, 4ft above floor DSA #3617	NONE DETECTED	Granular Mins. Gypsum Binder
729-11-004	Homogeneous gray 1/2in to 4in dia mudded w/canvas wrap pipe fittings (high temp) elbow on domestic hot water run, 6ft above floor, 15ft N of S wall DSA #3617	15-20 CHRYSOTILE	Fibrous Glass Binder
729-11-005	Homogeneous gray 1 1/2 to 2 in dia aircell w/canvas wrap pipe insulation (high temp) vertical domestic hot water run 5ft S of N wall, 1 ft W of E wall, 3ft A DSA #3617	15-20 CHRYSOTILE	Cellulose Binder

THE ANALYSIS USES POLARIZED LIGHT MICROSCOPY AND DISPERSION STAINING FOLLOWING E.P.A. METHOD #600M482020. NON-FRIABLE MATERIALS WERE ANALYZED APPLYING THE SAME METHOD. SAMPLES WERE NOT COLLECTED BY ASBESTECH. THIS REPORT MUST NOT BE REPRODUCED EXCEPT IN FULL WITH THE APPROVAL OF ASBESTECH. THIS REPORT RELATES ONLY TO THE ITEMS TESTED. THIS REPORT MUST NOT BE USED TO CLAIM PRODUCT ENDORSEMENT BY N.V.L.A.P. OR ANY AGENCY OF THE U.S. GOVERNMENT. ASBESTECH ACCEPTS TECHNICAL RESPONSIBILITY FOR THIS REPORT AND DATE OF ISSUE.
